EXPERIENCE

Software Engineer-1

Jan 2024 – Present

Bosch Global Software Technologies (BGSW)

Bangalore, India

- Engineered an event-driven architecture for the ticket creation mapping tool by integrating **Apache Kafka** to asynchronously process heavy attachments and enforce RBACs, which ensured high scalability and low-latency API responses for 350+ internal teams.
- Automated software compliance for **1,500+** repositories by architecting an end-to-end GitHub Actions onboarding platform integrated with GitHub and internal FossLens REST APIs.
- Implemented role-based Azure AD SSO using passport.js (JWT) to securely authenticate **100K+ users**, with an additional functionality to authenticate users with specific OneIdM roles & integrating Microsoft Graph role checks.
- Owined multiple POCs for the ticket creation mapping tool to assess the scalability of the tool by integrating possible solutions and by enforcing strict RBACs on ticket attachments for **350+ internal teams**.
- Designed and implemented multiple automation features using SWTBot which reduced manual efforts of the product after all releases by up to **85%**, which resulted in a net annual saved revenue of **\$3M YOY**.
- Technologies Used: **Java, Apache Kafka, Angular, Typescript, Node.js, Rest-APIs, SWTBot, JUnit**

Software Engineer Intern

June 2022 – July 2022

Hestabit Technologies Pvt. Ltd.

Noida, India

- Developed a monolithic backend and later refactored it into scalable microservices using Moleculer.js, improving API throughput and maintainability by handling bottlenecks.
- Delivered key features in building a low-latency, real-time communication channel between server and client using WebSockets, which resulted in continuous, uninterrupted data flow.
- Technologies Used - **Node.js, Moleculer.js, React, Javascript, Rest APIs**

TECHNICAL SKILLS

Backend: Java, Spring Boot, Node.js, Express.js, REST APIs, Kafka, WebSockets

Distributed Systems: Redis, BullMQ, Elasticsearch, Caching, Asynchronous Processing

Databases: MongoDB, Oracle, SQL

Cloud & DevOps: AWS, Azure, Docker, GitHub Actions, CI/CD, Git

Testing & Security: JUnit, Mockito, SWTBot, JWT, OAuth 2.0, RBAC

Frontend: Angular, React.js, TypeScript

PROJECTS

Order Planning – E-commerce Platform | GitHub | Live

February 2022 - December 2022

- Built a production-oriented e-commerce platform using **React, Node.js, Express, and MongoDB** supporting authentication, product discovery, cart, checkout, orders, reviews, and payments.
- Designed a horizontally scalable backend using **Redis caching**, stateless Express services, MongoDB replica sets, and Socket.IO to support multiple application instances and real-time communication.
- Built asynchronous processing pipelines using **BullMQ/SQS workers** and scheduled jobs, separating long-running workloads from synchronous API requests.
- Implemented **Elasticsearch** product search and vector search using Gemini embeddings, with JWT authentication using HTTP-only cookies.

ACHIEVEMENTS

Solved **1050+ Questions** on **LeetCode**.

Highest contest-rating of **1867** resulting in top **6%** in **LeetCode**

EDUCATION

SRM Institute Of Science And Technology

Chennai, India

B.Tech in Computer Science And Engineering – 8.61 CGPA

July 2019 – May 2023
